

In Bulkhead Cleaners

The In Bulkhead Cleaners (IBC) are mechanical cleaning tools primarily designed to clean connectors that are already mated inside of an adapter. The tools use a novel dry cleaning strand to gently sweep and lift away dust and residue from the connector end face. There are several variations available that are designed for both single fiber connectors such as LC, SC, ST and also for multi fiber connectors such as MTP/MPO and MTRJ.

LC/SC/ST Cleaning Tools
