

REEL CLEANER CASSETTES

The OPTIPOP R is a cassette style fiber optic connector cleaning system that can be refilled in the field to help reduce cleaning costs. It uses a densely woven micro-fiber cleaning fabric to remove harmful contaminants from the ferrule end face. The main OPTIPOP R cassette is capable of cleaning all standard single fiber connectors as well as most female (non-pinned) multi-fiber connectors such as the MTP/MPO and MTRJ. There are other variations available that are designed specifically for male (pinned) multi-fiber connectors. The anti-static cloth material produces a pristine end-face on fiber optic connectors and minimizes contaminant attraction. The cleaning fabric is pre-washed and produces less than 70 pcs/CFM of particles > 1mm in size, making this system a staple for technicians that are required to mate fiber optic connectors in the field or in clean room environments.

KEY FEATURES

replacement reels are easy to install and help to reduce cleaning costs

400+ cleanings per reel

eliminates electrostatic charges

pre-washed micro-fiber cloth virtually eliminates debris and other contamination

cost effective cleaning solution

one version accommodates almost all standard fiber optic connectors

ORDERING INFORMATION

Part Number	Description
CLN0409-2	Reel Cleaner, suitable for all connector types except male MT connectors
CLN0409-3	Reel Cleaner, suitable for male MT's (with guide pins), such as male MTP/MPO
CLN0409-4	Reel Cleaner, suitable for male MT-RJ ferrules
CLN0409-5	2-slot Reel Cleaner, suitable for all connector types except male MT connectors
CLN0409-6	Reel Cleaner Refills (Pack of 6)
